

## How high is that tree

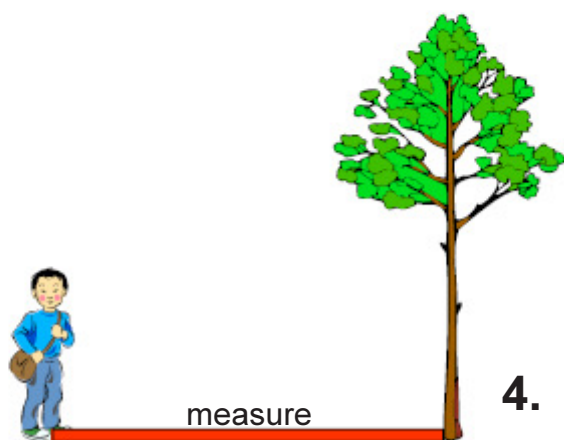

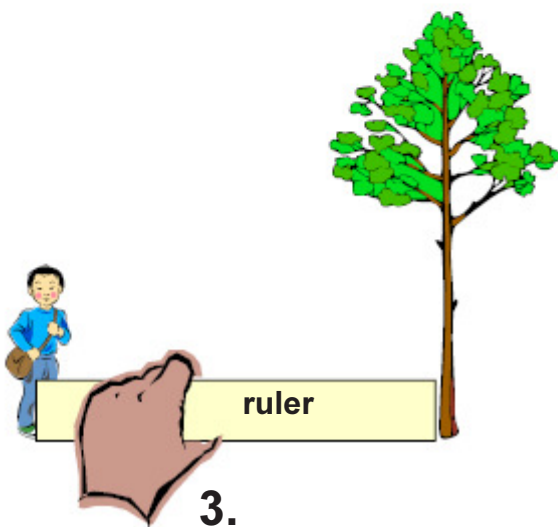

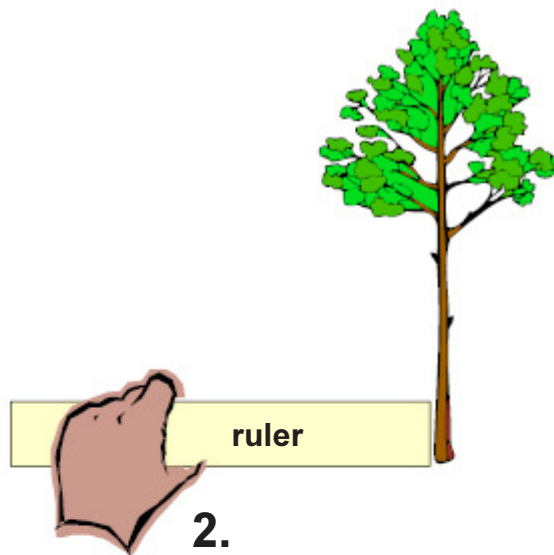

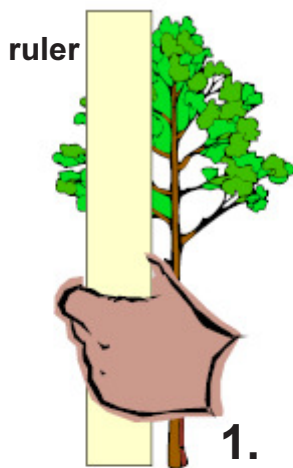

### Method 1

Choose a tall classmate and measure their height.  
 Ask them to stand under the tree and estimate how many times taller they would need to be to be the same height as the tree.  
 Multiply their height by the number of times taller.

..... height  
 x ..... times taller  
 = ..... height of tree

Write the height in metres .....

### Method 2

The tree is ..... metres high.
